Indicating lamps Series 8010 are based on the use of LED's. The indicating lamp displays the current state of a command by either switching on or switching off a light signal. In combination with a switchgear device, they indicate the switching state. Indicating lamps Series 8010 are designed to be built into an enclosure of the protection type „Increased Safety“. The light signal is displayed from the enclosure via the transparent lamp insert cover equipped with a diffuser lens. This making it easy to detect a light signal under bad light conditions.
